STATE SCHOOL FINANCE PROFILE 2019-20 SCHOOL YEAR

SOUTH CAROLINA

Summary: This 2019-20 profile of South Carolina’s public K-12 school finance system focuses on three core indicators from the School Finance Indicators Database: fiscal effort, statewide adequacy, and equal opportunity. On a weighted average of these three measures (see back), South Carolina scores 47 out of 100, which ranks 27th out of the 48 states with possible ratings.

FISCAL EFFORT

Fiscal effort is a measure of how much states devote to their schools as a share of their economic capacity (i.e., ability to raise revenue). Effort is calculated by dividing direct state and local K-12 expenditures in each state by its gross state product (GSP).

<table>
<thead>
<tr>
<th>South Carolina effort</th>
<th>4.22%</th>
</tr>
</thead>
<tbody>
<tr>
<td>U.S. average</td>
<td>3.61%</td>
</tr>
</tbody>
</table>

- SC is a high effort state.
- In FY 2020, SC spent 4.22 percent of its economic capacity (GSP) on its K-12 public schools.
- This was 0.62 percentage points higher than the unweighted national average of 3.61 percent.
- SC’s effort level ranks #9 in the nation (out of 50).

STATEWIDE ADEQUACY

Statewide adequacy compares actual per-pupil (PP) spending in each state to district-level cost model estimates of the amount required to achieve the modest goal of U.S. average test scores. The graphs to the right indicate the percentage of students in districts where spending is below adequate and the funding gap (% above/below) in the typical student’s district. The graphs include regional and national averages.

- Overall adequacy in SC is relatively low.
- By the modest standard of U.S. average scores, 81.8 percent of SC students attend inadequately funded districts, which ranks #42 in the nation (out of 49).
- The typical SC student’s district spends 14.2 percent below adequate levels, which ranks #38 in the nation.

EQUAL OPPORTUNITY

Equal opportunity is the comparison of adequacy between each state’s higher- and lower-poverty districts. The graph to the right presents adequate funding gaps by district poverty quintile (the blue diamonds are U.S. averages). The difference (in ppt. points) between the lowest- and highest-poverty groups is a state’s “opportunity gap.”

- Educational opportunity in SC is highly unequal.
- Spending in SC’s highest-poverty districts is 36.6 percent ($7,262 PP) below the estimated adequate level, compared with 3.0 percent ($337 PP) below adequate in the state’s most affluent districts.
- This opportunity gap of -33.6 percentage points is ranked #14 in the nation (out of 48).

www.schoolfinancedata.org
The data in this state profile are from the School Finance Indicators Database (SFID), a collection of public K-12 school finance and resource allocation indicators published annually by researchers from the Albert Shanker Institute, University of Miami School of Education and Human Development, and Rutgers University Graduate School of Education. The primary product of the SFID is the State Indicators Database (SID), a state-level dataset containing roughly 125 variables. This profile focuses on three types of measures included in the SID: fiscal effort, statewide adequacy, and equal opportunity. The full SID dataset, with accessible documentation of and data sources for all the measures presented in this profile, as well other SFID datasets, tools, and reports, are freely available to download at: schoolfinancedata.org. The following are some general notes about the profiles, followed by descriptions and notes pertaining to the three types of measures they present:

**Fiscal effort** provides measures of a state’s economic capacity to spend more on schools. It is calculated in the SFID by dividing direct state and local K-12 expenditures by either Gross State Product (GSP) or aggregate state personal income. Both of these are measures of a state’s economic capacity. In this sense, effort measures how much each state contributes as a percentage of how much it might contribute. The former denominator (GSP) is used in these profiles, but the two are highly correlated, and the income-based effort indicator is available in the SID. Bearing in mind that high-capacity states have larger economies, such as New York and California, can put forth lower effort than lower capacity states, such as Mississippi and Alabama, but the effort calculations are intended as a means of differentiating between low/inadequate funding states that do and do not have the capacity to increase revenue.

**Statewide adequacy** is typically defined as the extent to which the amount of funding for schools is sufficient for students to reach a minimum/acceptable level of educational outcomes. Our adequacy estimates compare each district’s actual spending levels to estimates from cost models of how much that district would have to spend in order to achieve national average test scores (i.e., “required” or “adequate” spending). We express statewide adequacy in terms of either: (1) the proportion of students in each state in districts with actual funding below estimated adequate levels; and (2) the adequacy gap (percentage difference between actual and estimated adequate spending) for the typical student in each state. All these estimates are from the National Education Cost Model (NECM), which is part of the SFID. The NECM calculates required spending based on the relationship between outcomes and cost factors such as regional wage, variation, district poverty, and student characteristics. Note that this model and the data it uses are necessarily imperfect, and estimates should be viewed with appropriate caution. For more information about the NECM, see the SID user’s guide. Some of the estimates presented in this section of the profile can be calculated using SID variables, whereas others (e.g., the district-by-district estimates in the right panel) require the use of the State Cost Database (OCD); many but not all SID adequacy measures (all of which have variable name beginning with necm,) are aggregations of DCD estimates. The full DCD dataset (going back to 2009) is also publicly available at the SFID website (2020 estimates will be released in early 2023).

**Equal opportunity** is achieved when none of that state’s districts’ poverty groups are substantially further above or below adequate spending levels than are other districts. In the SFID, we measure equal opportunity (EO) with the same NECM estimates used for statewide adequacy (see above), but in this case by comparing adequacy gaps (percentage difference between actual and estimated adequate spending) between the highest- and lowest-poverty districts in each state. That is, each state’s “opportunity gap” is the difference (in percentage points) between these two groups (district poverty groups are defined in terms of quintiles—e.g., the 20 percent highest-poverty districts compared with the 20 percent lowest-poverty districts in each state). Note that EO is conceptually independent of the “inequality” measures (e.g., a hypothetical state in which all districts are below adequate funding levels might still exhibit EO, so long as high- and low-poverty districts are inadequate by roughly the same proportions, whereas highly unequal opportunity might exist in a state in which funding is universally adequate, if high-poverty districts are more adequately funded than lower-poverty districts.)

### Fiscal effort

- **SID variables used in this section:** effort: year

**Fiscal effort** indicates how much of a state’s economic capacity goes toward K-12 schools. It is calculated in the SFID by dividing direct state and local K-12 expenditures by either Gross State Product (GSP) or aggregate state personal income. Both of these are measures of a state’s economic capacity. In this sense, effort measures how much each state contributes as a percentage of how much it might contribute. The former denominator (GSP) is used in these profiles, but the two are highly correlated, and the income-based effort indicator is available in the SID. Bearing in mind that high-capacity states have larger economies, such as New York and California, can put forth lower effort than lower capacity states, such as Mississippi and Alabama, but the effort calculations are intended as a means of differentiating between low/inadequate funding states that do and do not have the capacity to increase revenue.

**Statewide adequacy** is typically defined as the extent to which the amount of funding for schools is sufficient for students to reach a minimum/acceptable level of educational outcomes. Our adequacy estimates compare each district’s actual spending levels to estimates from cost models of how much that district would have to spend in order to achieve national average test scores (i.e., “required” or “adequate” spending). We express statewide adequacy in terms of either: (1) the proportion of students in each state in districts with actual funding below estimated adequate levels; and (2) the adequacy gap (percentage difference between actual and estimated adequate spending) for the typical student in each state. All these estimates are from the National Education Cost Model (NECM), which is part of the SFID. The NECM calculates required spending based on the relationship between outcomes and cost factors such as regional wage, variation, district poverty, and student characteristics. Note that this model and the data it uses are necessarily imperfect, and estimates should be viewed with appropriate caution. For more information about the NECM, see the SID user’s guide. Some of the estimates presented in this section of the profile can be calculated using SID variables, whereas others (e.g., the district-by-district estimates in the right panel) require the use of the State Cost Database (OCD); many but not all SID adequacy measures (all of which have variable name beginning with necm,) are aggregations of DCD estimates. The full DCD dataset (going back to 2009) is also publicly available at the SFID website (2020 estimates will be released in early 2023).

**Equal opportunity** is achieved when none of that state’s districts’ poverty groups are substantially further above or below adequate spending levels than are other districts. In the SFID, we measure equal opportunity (EO) with the same NECM estimates used for statewide adequacy (see above), but in this case by comparing adequacy gaps (percentage difference between actual and estimated adequate spending) between the highest- and lowest-poverty districts in each state. - **SID variables used in this section:** necm_prcostq1; necm_prcostq2; necm_prcostq3; necm_prcostq4; necm_prcostq5; necm_prcostq6

The scatterplot in the right panel presents, by district poverty quintile, adequacy estimates for all five quintiles in each state (although opportunity gaps as we define them for the purposes of this profile use only the highest- and lowest-poverty groups, this graph permits comparison of gaps between different combinations of groups). The state (bars) and U.S. (blue diamonds) estimates in the graph are average differences between actual and required spending (weighted by enrollment), by district poverty quintile. Note, however, that poverty quintiles are defined state by state, and so the actual poverty quintiles represented in the graph may not perfectly mirror the states’ own definitions (e.g., the 2013-2016 estimates pertain to students in rural district poverty groups).
